

GlobeTrotter **Mobility Manager**

Seamless hand-over between access technologies

- Manages worldwide connectivity across WWAN, WLAN and wired networks
- Easy to use interface that can be customized
- Sets secure and stable data connections
- Integrated SMS Manager

About GlobeTrotter **Mobility Manager**

GlobeTrotter Mobility Manager is a unique software solution that enables fast, simple and easy access to data services whilst hiding from the end user the complexity of the underlying wireless technologies.

GlobeTrotter Mobility Manager gives access to both wireless Internet as Intranet by combining a multitude of technologies such as HSPA, HSDPA EDGE, UMTS, GPRS, GSM, WLAN and LAN in seamless mode.

The modular setup of the software enables tailoring to the needs of the

customer which makes it the perfect tool for a wide range of users. Be it the mobile business customer who needs to be in permanent contact with his corporate network and who needs the notebook for connecting as easily and conveniently as if it were in the office environment. Be it the individual end-user who wants easy access to the Internet.

The modular approach will also give an operator the choice of functionalities and the looks & feel that are required for a particular market.

Features

- Manages data access across WWAN (HSPA, HSDPA, EDGE, UMTS, GPRS, GSM), WLAN, and wired networks (LAN, ADSL)
- Auto Connect Manager handles connecting and re-connecting, initiates changes between access networks when needed and monitors available access networks
- Modular Design of GlobeTrotter Mobility Manager allows customization of looks and feel as well as functional levels (SMS, WLAN or MoIP)
- Easy to customize toolbars, user selectable icons
- Full SMS manager synchronised with Outlook™
- Set-up Group lists to make sending SMS to multiple recipients easier
- Automatically sets profile based on SIM card
- Radio Power down to meet aviation security legislation
- Supports Centrino™ functionality
- Automated Authentication mechanism
- Standard based on EAP-SIM. Adaptable to other protocols
- Mobile IP (seamless hand-over technology) compliant with existing Mobile IP standard
- The Mobile IP component keeps sessions alive over different access channels in case of switch between LAN, WLAN and WWAN
- Supports all major VPN clients for secure remote wireless access to the corporate site including legacy VPN clients
- Range of facilitation services to integrate seamless solution
- Fully compatible with current portfolio of Option Devices
- Compatible with Windows® 2000, XP32, XP64, Vista
- Multiple language support
- Supports Zero-CD™ technology introduced with Option's data products
